

ABSTRACT

The present invention concerns a method for informing a person that he or she can access to a WLAN, said person carrying or being associated with a mobile data terminal and a radiotelephone terminal.

Said method is characterised in that it consists in:
first detecting the presence of the WLAN, by receiving identity or presence signals broadcasted by a or the radio access point of the considered WLAN, with a radio receiver associated to or integrated in said mobile data terminal and which is adapted and susceptible to receive radio signals broadcasted by a WLAN, and, then sending a signal or a message, via a short range radio transmitter, to said radiotelephone terminal equipped with an adapted receiver, in order to inform said person that he or she can access to said WLAN.
